

# Welcome, I want to tell something about me.

## About me

I used to learn IT Science in High School, I even pass extended end-school IT exam... and pass recruitment for IT studies. I didn't go to IT College; I picked something else, completely other way - I went to forestry college. It was game-changer decision. I was working and feel free and well during my duties, but it is end now. There is not much work in forestry, so decided to: "I am back to coding!" - and I wish to be professional in IT (I'm working now hard to learn all by myself).

My hobby is coding. Mainly OOP, You can find some examples [here](#). I wish make Java based cross-platform apps but I need to learn a lot now. So far I get java core, basics of java fx and spring framework. I did a simple web app and secure it by login and password. Soon I have plan to start making simple apps.

I started by changing OS to Linux and refreshing HTML and Learn Java. I created this page by hand coding and have plans to develop further using JavaScript and MySQL smart solutions. Now I am learning further to catch some experience. **In the future I wish to be professional software or back-end web developer.**

I used my coding skills on this site but I am planning to rebuild this side to more modern look and better content. In my plans are: implementation of php based cms, fancy jQuery animations, better design and some servlets. Unfortunately I can not deploy my spring boot web app (.jar or .war file) to this host via cpanel :-[. I need to find another hosting later.

## My skills

I have made this web side by myself in Atom editor using Emmet and Bootstrap framework, in mind I wanted simple, fast and nice portfolio. [kmarchel.pl](#) is fully responsive, handmade and developed by me. Check also my **spring web app example of my site at GitHub**. Most of time I'm using Eclipse @ Linux Mint, is versatile (git, java, javaFX, Selenium) and easy to configure. Moreover Linux is fast, lightweight and easy in use (sometimes).
